

Stage	Step	Ours	Alice	Bob
Pruning Stage	Pruning	I want to explore the configuration of the Linux kernel's 'config' to {target}. I will sequentially show you each level of menuconfig's directories, and I need you to tell me which director are possibly related to {target} based on your existing knowledge ...	I'm interested in delving into the settings of the Linux kernel's 'config' to achieve {target}. I'll sequentially present the options from config's hierarchy, and I need your guidance to identify which options may relate to {target}, drawing from your current understanding.	I plan to navigate through the 'config' options of the Linux kernel related to {target}. As we proceed step-by-step through the layers of kernel config's directories, please help me discern which directories could possibly relate to {target}, using your pre-existing knowledge.
Proposing Stage	Self-explanation One	For {target_object}, analyze each of the following settings separately to determine whether they will increase or decrease {target_object} if the setting is enabled:	For {target_object}, individually review the settings listed to ascertain whether turning each one on would cause {target_object} to increase or decrease:	Investigate each setting separately for {target_object} to determine if enabling it will cause an increase or decrease in {target_object}.
	Self-explanation Two	Based on the analysis above, provide the options that could potentially affect {target_object} and analyse whether enabling the settings will increase or decrease {target_object}	Given the previous analysis, pinpoint the settings that could influence {target_object} and determine whether enabling these settings would raise or lower {target_object}	Choose settings might affect {target_object} considering the analysis above, evaluate whether their activation will result in an increase or decrease of {target_object}
	Output	According to the above analysis, for the options that could potentially impact {target_object}, determine whether each option will increase or decrease {target_object} ..	Based on the analysis provided, for the settings that may affect {target_object}, assess whether activating each one will lead to an increase or decrease in {target_object}...	Ascertain whether each option related to {target_object}, as per the analysis above, possesses the potential to positively or negatively influence {target_object}.
Correction Stage	Correction	I modified the following option:... The boot-up error is ... Which option did I change to cause this?	The following are the configuration options in the modified .config file, which resulted in errors being displayed...Please analyze and explain which option might be causing this issue.	I modified some menuconfig options as follows. After compiling the OS, the following error message appeared during boot...Please provide all the possible options related to this error from the options I modified.
